

PCCA Position Statement #16

Types of Terrazzo Classes

Different type of terrazzo finishes;

- Rustic Terrazzo- Terrazzo with a non-ground, textured surface, for exterior use. This system is available with Bonded and Monolithic Terrazzo
- Bonded Terrazzo: A cement matrix and underbed system for interior and exterior areas where conditions require 30mm to 45mm of recessed depth to be filled in addition to the 13mm terrazzo topping.
- Monolithic Terrazzo- This 13mm thick cement matrix veneer placed upon a provided concrete slab is dependent on the concrete quality for flatness and crack prevention. On grade or below grade only.
- Polyacrylate Terrazzo- A nominal 10mm thick polymer modified cement matrix veneer placed upon a provided level concrete slab. Polymer provides strength to allow for thinner applications of cementitious systems.
- Epoxy Terrazzo- A nominal 6mm or 10mm thick resin matrix veneer placed upon a level concrete slab; Also can be specified with glass, synthetic, or granite aggregates in lieu of marble to provide brilliant colors or chemical resistance.
- Sand Cushion Terrazzo: A cement matrix topping underbed with wire reinforcing, isolation sheet, and sand layer system for interior floor use.
